

CARMAX

In partnership with LSI and the utility companies, Carmax was able to accomplish significant energy savings and interior lighting design goals by --

- Replacing 400-watt HID fixtures in the show room with LSI's Retailmax T-5/5000°K fixtures for a 45% energy reduction per fixture. The Retailmax includes a micro matte reflector for optimum performance
- Replacing 400-watt HID fixtures in the service areas with LSI's IMX fluorescent industrial fixtures, complete with instant on and longer lamp life, which also result in a 45% reduction in energy per fixture
- Increasing light levels in the diagnostic/inspection area with LSI's EG3 fixture with 5000K lamps mounted at 45 degrees for optimum aiming
- Replacing 100-watt HID track fixtures with fluorescent wall washers for both energy savings and better coverage per fixture
- Utilize energy rebates available in most parts of the country

In addition to this program, LSI currently supplies Carmax with LSI Greenbriar fixtures, featuring ART (Advanced Reflector Technology), and matching wall packs for their outdoor lighting package.
