

Crossover to New Technology with LSI

City Parking Garage Cincinnati, OH

Today, tenants and customers expect parking facilities to provide more than just a parking space in a cave. They demand an environment that offers a sense of safety, security, visibility and visual comfort. White LED lighting is proving to be the answer to these demands. The added benefit? Dramatically reduced energy consumption and maintenance.

In an effort to improve its garage lighting and the associated costs to maintain it, this downtown parking garage upgraded its existing 175 watt metal halide fixtures to LED. Selecting LSI's *Crossover* XPG parking garage fixture, the retrofit was a 1 for 1 replacement of 38 fixtures to light the single story underground garage.

The result?

- Outstanding uniform lighting with a whiter light than the previous metal halide fixtures – dramatically improving the overall 'seeability' inside the garage
- Easy installation and virtually no maintenance
- A 71% reduction in annual energy costs
- A 2.23 year payback
